Low cost repairs on your draghoses from as little as \$40

Have you got splits or holes in your draghose? We have a cost effective, tough and low profile electro fusion fitting that we can fit for you. No more bulky fittings, or unusable hoses, these fittings bring your draghoses back to life. **Give us a call on freephone 0800 889 7755.**

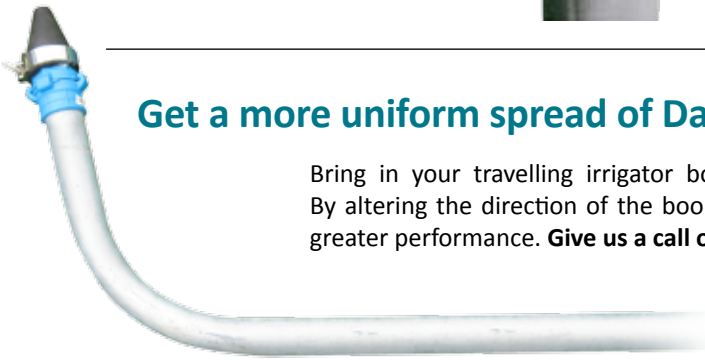

Sick of hard to clean irrigator nozzles?

Bring in your travelling irrigator booms and get these quick release fittings and nozzles fitted for as little as \$30 each. Just one simple turn and your nozzle will be unblocked, no tools required and you are back in business. It's that simple. **Give us a call on freephone 0800 889 7755.**

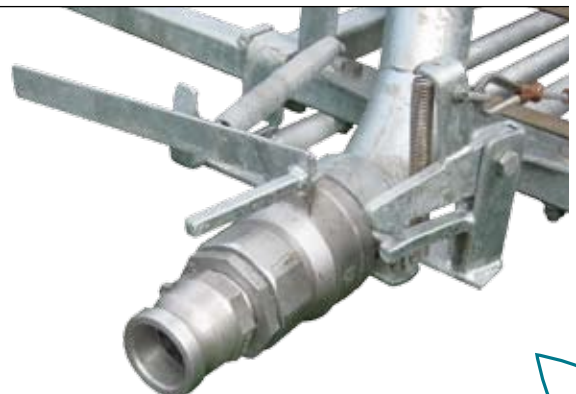

Get a more uniform spread of Dairy Effluent from your travelling irrigator

Bring in your travelling irrigator booms and get them adjusted to get improved performance. By altering the direction of the booms you can achieve a greater throw, a more even spread, and greater performance. **Give us a call on freephone 0800 889 7755** to give your irrigator a makeover.

Stop your irrigator from leaving Dairy Effluent "donuts" in your paddock, minimise environmental risks and costs.

Install an automatic cut off on your irrigator, so when your irrigator stops at the end of its run, so does the flow of Dairy Effluent. Minimise the risk of leaving big ponds of Dairy Effluent on your paddocks, or it running into drains and waterways. For as little as \$390 excluding GST get some peace of mind. **Give us a call on freephone 0800 889 7755.**

Want your travelling irrigator to really perform and to be able to deliver Dairy Effluent application at a low rate?

All you need is good pressure across your farm, and a quality irrigator. The condition and size of your pump, and the size of your hydrant line can dramatically effect the irrigator's performance, as can its design. Modern travelling irrigators can spread Dairy Effluent with the correct pressure at very low rates, and evenly across the paddock.

Give us a call on freephone 0800 889 7755.

Reduce wear and tear on your pump

Sand, stones and other abrasive materials damage your pump, and silt up your tanks and ponds. Minimise this through a sandtrap designed to slow Dairy Effluent down to below 2 km an hour, trapping most of the solids. Even if you have a sandtrap, the design and installation could be costing you money. Get us to have a look at your system.

Low rate (4mm) spreading of Dairy Effluent made easy

For times of the year when you need to put Dairy Effluent on at low rates, or onto sloping land and hard to reach places, our **Uni Sprinkler is the solution**. Designed specifically to spread Dairy Effluent, it is simple to use and fits easily into existing irrigation systems and hydrant lines. Released in 2009, the sales of these have been extraordinary, and it's not hard to see why! Get more grass growing using your effluent nutrients, in places you never thought possible.

Give us a call on freephone 0800 889 7755.

Increase your storage capacity without great expense

With plenty of rain around it's not difficult to fill up your ponds and sumps. By diverting your rain water from your yards and other concrete areas when clear of Dairy Effluent you can dramatically increase your storage capacity without digging a bigger hole!
